

Location: Left lateral border
Superficial excision margins (in-situ): 3 mm clearance
Superficial excision margins (invasive): 2 mm clearance
Deep excision margin: 6 mm clearance
Ulceration: Present
Ulceration extent %: 30 %
Mitotic rate of dermal invasive melanoma per sq mm: 2per sq. mm
Microsatellites: Absent
Clark level: III
Lymphovascular invasion: Absent
Tumour-infiltrating lymphocytes: Present
Intermediate/late regressions: Present
Desmoplasia: Absent
Neurotropism: Not identified
Evidence of assoc. benign melanocytic lesion: Yes
Description of evidence of benign melanocytic lesion : Intra dermal naevus
Growth pattern: Mixed pattern
Subtype: Superficial spreading melanoma (SSMM)

SYNTHESIS AND OVERVIEW

AJCC v7 Tumour Stage:T1b

AJCC v7 Nodal Stage:NX

Reported by: Dr. David Ellis

On: 27/06/2011
